WORK EXPERIENCE

Freelance Software Engineer |Remote
May 2023 – Present
- Spearhead remote freelance projects, specializing in the development of hybrid applications using React Native, Electron and React.
- Collaborate closely with clients to conceptualize, design, and implement efficient and responsive user interfaces that align with their unique visions.
- Deliver comprehensive end-to-end mobile solutions, tailored precisely to clients' needs, ensuring seamless functionality and exceptional user experiences.

Synchronized Technologies |Remote
Software Engineer   March 2022 – Present
- Develop and implement diverse features within a flagship mobile app, utilizing React Native, TypeScript, Node, and MongoDB.
- Collaborate on refining the app's functionality, including thorough testing to ensure seamless user experiences.
- Contribute to the establishment of an efficient mobile development pipeline from the ground up, enhancing project delivery and collaboration.

BC Labs |Boca Raton, FL
Software Engineer   December 2021 – December 2022
- Designed and architected hybrid mobile application architectures using React Native.
- Implemented REST APIs for various applications.
- Executed custom native iOS functionalities using Swift, enhancing app performance and functionality.

Target |Delray Beach, FL
Tech Consultant   October 2020 – March 2021
- Analyzed crucial metrics to optimize and expedite store sales.
- Provided tailored tech solutions to clients, enhancing their shopping experience.

NOTABLE PROJECTS

Jaarrive- A React Native Airport Time Optimization App
Developer   March 2022 – Present
- Developed a React Native application, "Jaarrive," aimed at reducing CO2 emissions by optimizing airport arrival times.
- Designed and implemented an algorithm to calculate optimal arrival/departure times based on flight status, effectively reducing unnecessary wait times.
- Integrated predictive analysis model into the React Native application, improving accuracy of time recommendations.
- Utilized React Native framework to create a user-friendly interface for the app.

Imagynate - A React Native Photo Aggregation App for Photographers
Developer   January 2022 – December 2022
- Collaborated on the development of the "Imagynate" React Native application tailored for photographers, facilitating efficient photo organization.
- Incorporated Native Camera Roll functionalities into the app using Swift and Kotlin, contributing to an enhanced user experience.
- Designed and executed REST APIs with NodeJS and TypeScript for the backend, ensuring seamless communication between the app and the server.
- Constructed the front-end using React Native, resulting in an appealing and user-centric interface.

LANGUAGE & TECHNOLOGY

Languages: (experienced): JavaScript, Typescript, HTML, CSS; (familiar): C#, SQL, GraphQL
Technologies: Node.js, Express, React, React Native, Mongo, Google Cloud, REST, Git
